

Full Stack Intern Practical Test

Technologies: PHP, HTML, CSS, JavaScript

This practical test is designed to evaluate both frontend and backend development skills for internship candidates.

Test Rules

Duration

- Total Time: 1.5 Hours

Allowed Technologies

- PHP (Core PHP only)
- HTML5
- CSS3
- JavaScript
- MySQL
- Bootstrap allowed (optional)

Not Allowed

- AI tools (ChatGPT, Copilot, Gemini, Claude, etc.)
- Copy-pasting from Stack Overflow or tutorials
- Laravel / React / Vue / Angular
- Using ready-made admin templates

Candidate Instructions

- Create the project from scratch.
- Write clean and readable code.
- Use proper folder structure.
- Add comments where necessary.
- Make the UI responsive.
- Database must be included.
- Final submission should contain:
 - Source code
 - SQL file
 - README with setup instructions

Practical Task

Project: Mini Task Management System

Build a simple Task Management System where users can:

- Add tasks
- View tasks
- Update task status
- Delete tasks
- Search tasks

The system must include both frontend and backend functionality.

Database Requirements

Database Name

intern_task_system

Table: tasks

Field	Type
id	INT (AUTO_INCREMENT)
title	VARCHAR(255)
description	TEXT
priority	ENUM('Low','Medium','High')
status	ENUM('Pending','Completed')
created_at	TIMESTAMP

Required Features

Part 1 - Frontend Tasks (40 Marks)

1. Responsive UI (10 Marks)

Create a responsive dashboard layout.

Requirements:

- Header section
- Task form
- Task listing table/cards
- Mobile responsive design
- Proper spacing and alignment

Evaluation

- UI quality
- Responsiveness
- Clean layout
- CSS organization

2. Add Task Form (10 Marks)

Create a form with:

- Task title
- Description
- Priority dropdown
- Submit button

Validation

Frontend validation using JavaScript:

- Empty fields not allowed
- Minimum title length: 3

3. Dynamic Search (10 Marks)

Add a search bar.

Requirements:

- Search tasks by title
- Use JavaScript for filtering without page reload

4. UI Enhancements (10 Marks)

Add:

- Hover effects
- Loading states

- Success/error messages
- Priority badges/colors

Part 2 - Backend Tasks (50 Marks)

1. Database Connection (5 Marks)

Create proper database connection using:

- mysql

2. Add Task Backend (10 Marks)

Insert tasks into database.

Requirements:

- Validate inputs
- Prevent SQL injection
- Show success message

3. Display Tasks (10 Marks)

Fetch tasks from database and display.

Requirements:

- Show all fields
- Latest tasks first

4. Update Task Status (10 Marks)

Requirements:

- Change Pending → Completed
- Update directly from task list

5. Delete Task (10 Marks)

Requirements:

- Delete button

- Confirmation alert before delete

6. Code Structure (5 Marks)

Evaluate:

- Folder structure
- Reusable code
- Readability
- Naming conventions

Bonus Tasks (Optional - 10 Marks)

Candidates can complete any:

- Pagination
- Dark mode
- AJAX task submission
- Task edit feature
- Filter by priority

Recommended Folder Structure

```
project/
├── css/
│   └── style.css
├── js/
│   └── app.js
├── includes/
│   ├── db.php
│   └── functions.php
├── actions/
│   ├── add-task.php
│   ├── delete-task.php
│   └── update-task.php
├── index.php
├── README.md
└── database.sql
```

Marking Scheme

Section	Marks
Frontend	40
Backend	50
Code Quality	10
Bonus	10
Total	110
